SECTION 1

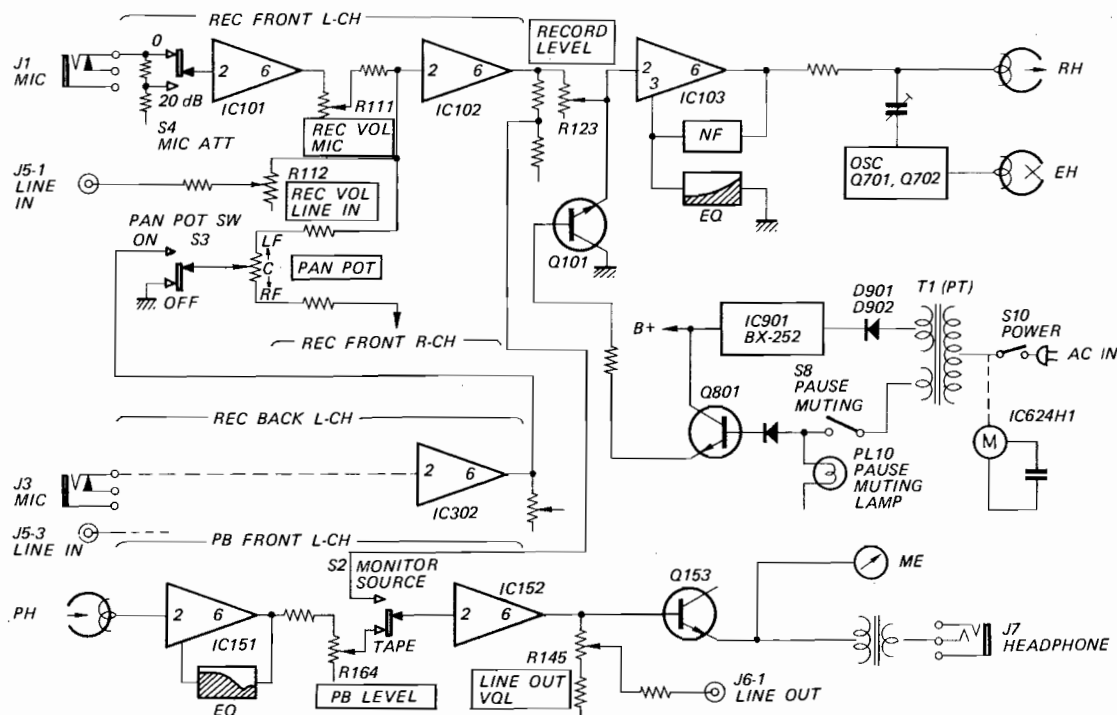

OUTLINE

1-1. PAN POT (Panoramic Potentiometer)

With PAN POT switch turned ON, the BACK channels are mixed into the FRONT channels to reproduce the two-channel stereo sounds and PAN POT controls can shift a sound image on a reproduced stereo sound field. The two FRONT channels are used for reproducing a stereo sound field and the two BACK channels for reproducing a sound image and shifting it.

SECTION 3 ADJUSTMENTS

3-1. MECHANICAL ADJUSTMENTS

Tension Arm (A) Adjustment — playback mode —

Perform this adjustment after turning supply reel table counterclockwise by hand.

Note: Ensure that the tape uniformly comes in contact with the tension arm pin at the beginning and end of the tape. (If necessary, adjust by bending tension arm pin.)

Capstan Idler Adjustment

Perform this adjustment after motor pulley height check (See Page 12).

— playback mode —

- Note:**
1. Perform this adjustment for both vertical and horizontal positions.
 2. After the adjustment, apply locking compound to the screw.
 3. Make sure that capstan idler does not contact motor pulley and flywheel in stop mode.

Pause Mechanism Adjustment — playback mode —

- ① With pause lever pulled, adjust pause adjusting plate position by loosening screw (A) so that clearance between pinch roller and capstan is 0.5 ~ 1 mm (1/32 ~ 1/16 inch).

- Note:**
1. When pulling pause lever in stop mode, ensure that pause lever is not locked.
 2. When pulling pause lever in playback mode, ensure that brake operates.

Take-up Torque Adjustment

— playback mode at 9.5 cm/s (3 3/4 ips) tape speed —

Note: After the adjustment, apply locking compound to the screw.

Tension Arm (A) Back-tension Adjustment

Perform this adjustment after tension arm (A) adjustment (See Page 9).

Note: If the specified back tension is not obtained by the spring hook positioning, perform tension arm (A) adjustment (See Page 9).

Reel Table Height Adjustment — playback, rewind and fast forward mode —

Adjust by changing the washer so that the tape does not come in contact with the flange of the reel.

Washer

Part No.	Thickness (mm)
3-701-443-01	0.13
3-701-443-11	0.25
3-701-443-21	0.50

Note: After the adjustment, perform back tension and take-up torque adjustments. (See Page 10).

Fast Forward Pulley and Driving Idler Adjustment — stop mode —

If necessary, adjust by bending idler arm.

Bias Timing Switch (S12) Position Adjustment

Note: Ensure the following:

1. Bias timing switch is actuated in playback mode.
2. When changing the mode from record to stop slowly, REC button is released after the bias timing switch is released.

Brake Adjustment (take-up reel table)

Note: The torque should be measured just when driving idler stops rotating.

Pinch Roller Stroke Adjustment

Remove head deck by removing four screws indicated by ▲ on Page 41.

— stop mode —

- Note:** 1. Put dummy capstan * into capstan bearing and ensure that pinch roller shaft moves by 3 ~ 4 mm (1/8 ~ 5/32") on the retractive lever when changing the mode from stop to playback.
2. Ensure that washer of pinch roller shaft does not contact the part indicated by ★ when changing the mode from playback to fast forward slowly.
3. Apply locking compound to the screw.

* Dummy Capstan (capstan shaft)

Prepare a flywheel ass'y (X-3472-003-0) and remove capstan shaft from it by patting the head of the capstan shaft with the hammer, taking care not to bend the shaft.

Bottom view of head deck

Pinch Roller Pressure Check

1. Put dummy capstan * into capstan bearing and ensure the following.
